OZecoDrive™

Powerful electric inboard motor

OZcooler™

Energy efficient fridge without moving parts

OZbed™

Exclusive bed mattress with active ventilation and heat

OZsolar™

Thin and efficient solar panels

The Ultimate Inboard Motor for Sailboats - Powerful, Clean and Safe

OZ Marine creates solutions for people wanting an easier and more comfortable life onboard. We at OZ Marine believe that life at sea can be even more enjoyable if the environment is in good health. We have been committed to developing ecologically sustainable products for two decades.

The electric motor system OZecoDrive is quiet, reliable and works as an efficient generator by means of the propeller charging function when under sail. Maximum motor power for maneuvers is available within seconds, providing greater safety. Add to these advantages access to an exclusive battery bank for 230V-appliances by means of an inverter.

Drivetrain: Folding propeller with direct drive and modes for forward/reverse/charge. No reverse gear. Reverse motion by simply switching motor polarity. Free maintenance; no fuel or grease; no oil, filters, pumps, belts or hull holes.

Batteries: A battery bank normally consists of 2 to 8 AGM batteries depending on range needs. Battery recharging by shore power, through propeller charging, via solar cells or using a genset.

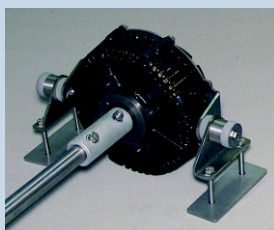

Install it yourself: The OZecoDrive standard delivery provides all you need for installation including everything from a shore power cable to the optimized folding propeller. The self adjusting motor brackets and tailor-made electrical cables, together with the complete step-by-step installation manual makes the job fast and easy with no heavy lifting. Support is available for troubleshooting. 3-year warranty.

The possibility of using, for example, an electric kettle, hairdryer or microwave oven not only increases comfort but also saves fuel. Thus, there are plenty of good reasons to choose OZecoDrive. Still, let us mention some of the unique features of our products: The compact motors and leak-proof batteries may be installed inside volumes that don't intrude on interior space. OZecoDrive is an inboard motor system requiring only a minimum of service, maintenance and winter conservation. That means more time at sea with the OZecoDrive!

Performance

OZcooler™

Cool, efficient and silent

OZcooler is a marine refrigerator with no moving parts. It has a seawater-cooled thermoelectric heat pump and is easily connected to most built-in cooler boxes. OZcooler is an OZ Marine innovation.

OZbed™

Fresh, comfortable and exclusive

OZbed is a mattress providing excellent ergonomic and thermal comfort. The mattress is built with galvanized pocket springs, active ventilation and heating. The ventilation (2W) provides a dry and odor-free mattress without dust mites. The electrical panel heating increases the temperature by 10° C when needed. OZbed is a registered trademark of OZ Marine.

OZsolar™

Pliable, thin and efficient

OZsolar is a thin and durable photovoltaic panel that may be applied directly to boat surfaces. With a thickness of only 3 mm panels may be mounted on a radius of as little as one meter. OZsolar 27W weighs only 475 grams. The panels are manufactured for assorted applications hatch cover, transom or hull sides. OZsolar is OZ Marine designed and produced in Sweden.

OZcork™

Pleasant, practical, economical

Pleasant, practical, economical OZcork is a natural cork intended primarily for cockpit seating areas. The natural properties of cork furnish an easily maintained and comfortable non-slip surface. OZcork allows for affordable and simple, do-it-yourself assembly. The sheets are glued seamlessly onto the surfaces. OZcork is an OZ Marine designed product manufactured in Portugal.
